DETAILED ACTION

Allowable Subject Matter

Claims 1-22 are allowed in view of the prior art.

The following is an examiner's statement of reasons for allowance:

As to claims 1, 10, 21, and 22, the prior art of record, taken either alone or in combination, fails to disclose or render obvious a method and apparatus for measuring the group delay of a device under test, the method and apparatus comprising sending one or more pulses through both a device under test and an interferometer, and then measuring both the temporal and spectral intensities of the pulses, and using these temporal and spectral intensities to determine the group delay of the device under test, in combination with the rest of the limitations of the above claims.

With further regard to these claims, the prior art of record, such as US Pat. 5,530,544 to Trebino et al discloses an apparatus and corresponding method that measures optical characteristics of objects that are subjected to optical pulses propagating therein. A spectrometer is used to measure spectral intensities of the light passing through both an interferometer and the object under test to determine such characteristics as group delay; however, no separate measurement of temporal intensities are made to also be used in the determination of the group delay.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Art Unit: 2877

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. US Pat. 6,456,380 to Naganuma, and US Pat. 6,885,490 to Dorrer et al.
